Feliz 1984:

N. R. Williams, 1986 Carbohydrate Chemistry provides review coverage of all publications relevant to the chemistry of monosaccharides and oligosaccharides in a given year. The amount of research in this field appearing in the organic chemical literature is increasing because of the enhanced importance of the subject especially in areas of medicinal chemistry and biology. In no part of the field is this more apparent than in the synthesis of oligosaccharides required by scientists working in glycobiology. Glycomedicinal chemistry and its reliance on carbohydrate synthesis is now very well established for example by the preparation of specific carbohydrate based antigens especially cancer specific oligosaccharides and glycoconjugates. Coverage of topics such as nucleosides, amino sugars, alditols and cyclitols also covers much research of relevance to biological and medicinal chemistry. Each volume of the series brings together references to all published work in given areas of the subject and serves as a comprehensive database for the active research chemist. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis.

Environmental Simulation R.W. Marans, Daniel Stokols, 2013-06-29 This volume is intended to provide an overview and scholarly analysis of state of the art developments within the field of environmental simulation research. Environmental simulation involves the presentation of scale model previews, full scale mock ups and computer images of planned environments and activities taking place within them to designers and to prospective users of those settings. Environmental simulations are undertaken for many purposes including 1 the training of environmental design students and professionals 2 the assessment of people's environmental preferences and 3 the incorporation of observers' assessments of simulated settings into the planning design and renovation of actual environments to maximize the degree of fit between occupants' needs and the arrangement of their physical surroundings. Environmental simulation research has expanded rapidly during the past two decades as the result of increasing collaboration between behavioral and social scientists, environmental designers and professional planners. During this period alternative conceptual and methodological approaches to environmental simulation have emerged and numerous programs of simulation research have been initiated worldwide. To date however no attempt has been made to present a comprehensive review and assessment of these research developments and an analysis of their implications for design and public policy. Accordingly the major objectives of this volume are to provide an overview of key conceptual and methodological advances within the field of environmental simulation research and to place these diverse developments within a broader scientific and public policy context.
